

Master Power Brakes
Billet Aluminum Reservoir
Various Applications
P/N: AC6801278B & AC6801278G

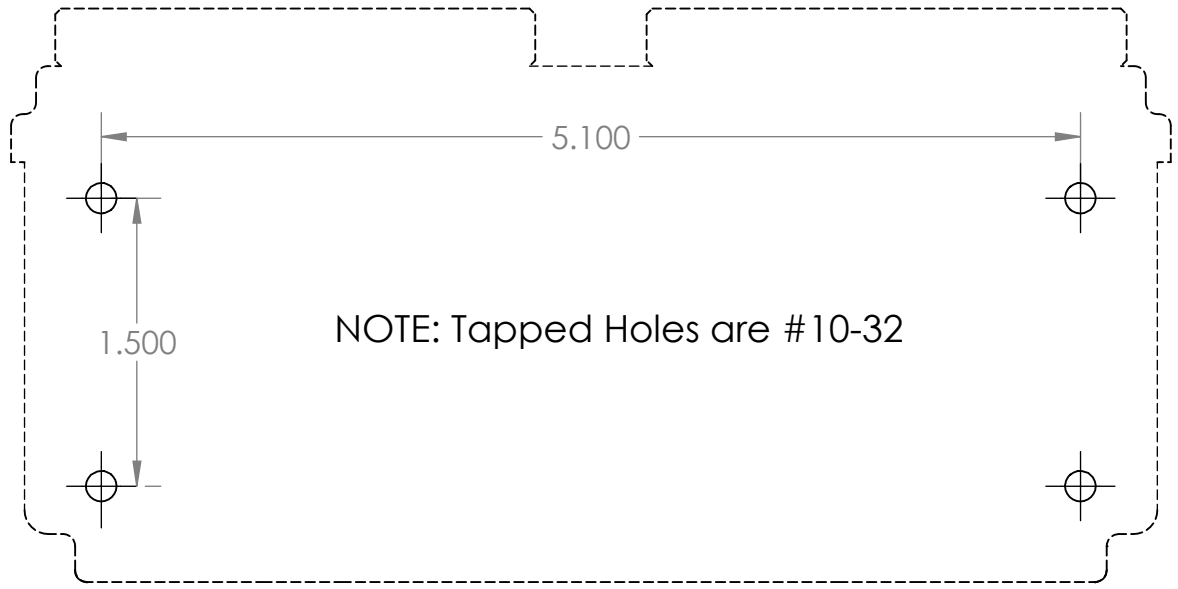

Thank you for purchasing the Master Power Brakes Billet Aluminum Reservoir Kit. This is a great and stylish way to provide a remote mounted fluid reservoir for your brake system when the master cylinder is mounted in a position that is not accessible. The reservoir is CNC machined from 6061 aluminum with a dual chamber design featuring individual o-ring sealed lids.

Parts List	
Quantity	Description
1	Billet Aluminum Reservoir
2	-4 AN Fittings w/ 1/4"-NPT Threads
2	5/16" Hose Bard w/ 1/4"-NPT Threads
4	#10-32 x 3/4" Stainless Steel Socket Head Cap Screws
4	#10 Stainless Steel Flat Washer
1	Mounting Template

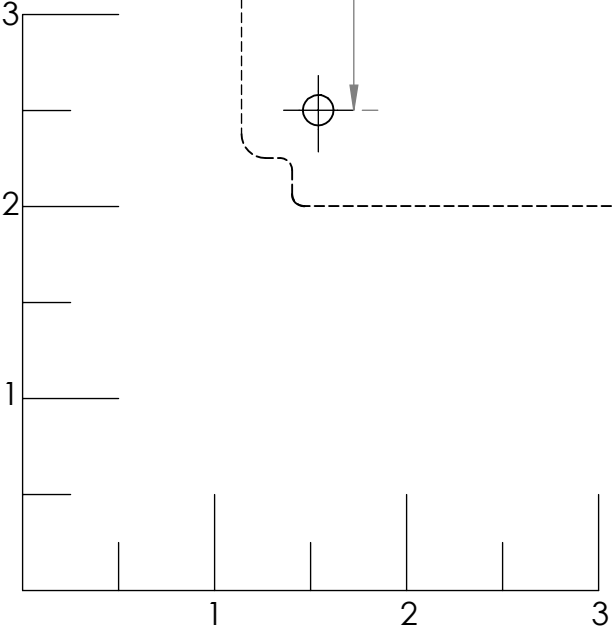

Installation Notes:

- The reservoir is supplied with both a hose barb and an AN fitting for plumbing to your master cylinder. The hose barb would be used with conventional EPDM rubber hose while the AN fitting is supplied for a custom hardline installation. **NOTE:** Apply a small amount of liquid Teflon sealant to the threads. **DO NOT USE TEFLON TAPE!** Teflon tape can contaminate the system if it gets inside the reservoir.
- Hardware is provided with the reservoir. Use anti-seize on the threads prior to installing them into the reservoir. Be sure the mounting of the reservoir doesn't allow the bolts to bottom out in the reservoir. If additional length is needed, hardware can be obtained locally at a hardware store.
- Due to the machining process, it is not uncommon for there to be a slight tight spot when threading the lids into the main body. However, use care when threading the lids into the reservoir to avoid cross threading.

If you have any questions or comments, please call Master Power Brakes at (888) 351-8781.

NOTE: Tapped Holes are #10-32
