

WARNING

Proper operation of your brakes is essential for your safety and the safety of others. Any brake service should be performed ONLY by persons experienced in the installation and proper operation of brake systems. It is the responsibility of the person installing any brake component or kit to determine the suitability of the component or kit for the particular application. After installation and before operating your vehicle, be sure to test the function of the brakes under controlled conditions.

DO NOT DRIVE WITH UNTESTED BRAKES!

BM1746 INSTALLATION INSTRUCTIONS

GM 7" BOOSTER W/ MASTER

Your kit contains the following components:

- (1) Left bracket
- (1) Right bracket
- (1) Pedal push rod
- (1) Clevis with clevis pin
- (1) Jam nut 3/8 x 24
- (4) 8mm bracket nuts
- (2) Master cylinder mounting nuts
- (1) Firewall dust boot

Note: Right side indicates passenger side. Vacuum check valve on booster may go on top or bottom.

1. Mount the supplied push rod and clevis to the back of the booster. Don't worry about length at this time. You will adjust it later.
2. Remove the original rubber boot from the booster and slide on the supplied boot
3. Install right and left mounting brackets onto the booster with supplied 8mm nuts.
4. Disconnect the original master cylinder brake lines.
5. Remove the original master from the firewall.
6. If the vehicle was original power brakes the clevis will attach to the original location.
7. If the vehicle was manual brakes you will have to drill a hole 1" lower than the original hole on the pedal.
8. Mount the brake booster to the existing 3/8" studs on the firewall using the original nuts and lockwashers.
9. Adjust clevis to pedal height. Install clevis pin and cotter pin.
10. Bench bleed the master cylinder.
11. Mount the master to the booster and attach the brake lines.
12. Supply the booster with at least 18" vacuum from either the intake manifold or the back of the carburetor.
13. Run the lines as follows: The outlet closest to the master cylinder mounting flange will feed the rear and the outlet furthest from the mounting flange will feed the front.

Installation instructions

1. Mount the supplied push rod and clevis to the back of the booster. Don't worry about length at this time. You will adjust it later.
2. Remove the original rubber boot from the booster and slide on the supplied boot
3. Install right and left mounting brackets onto the booster with supplied 8mm nuts.
4. Disconnect the original master cylinder brake lines.
5. Remove the original master from the firewall
6. If the vehicle was original power brakes the clevis will attach to the original location.
7. If the vehicle was manual brakes you will have to drill a hole 1" lower than the original hole on the pedal.
8. Mount the brake booster to the existing 3/8" studs on the firewall using the original nuts and lockwashers.
9. Adjust clevis to pedal height. Install clevis pin and cotter pin.
10. Bench bleed the master cylinder.
11. Mount the master to the booster and attach the brake lines.
12. Supply the booster with at least 18" vacuum from either the intake manifold or the back of the carburetor.
13. Run the lines as follows: The outlet closest to the master cylinder mounting flange will feed the rear and the outlet furthest from the mounting flange will feed the front.

14. For a disc / drum system we recommend the use of a combination valve such as our VL3350. If using this valve plumb the system as follows.

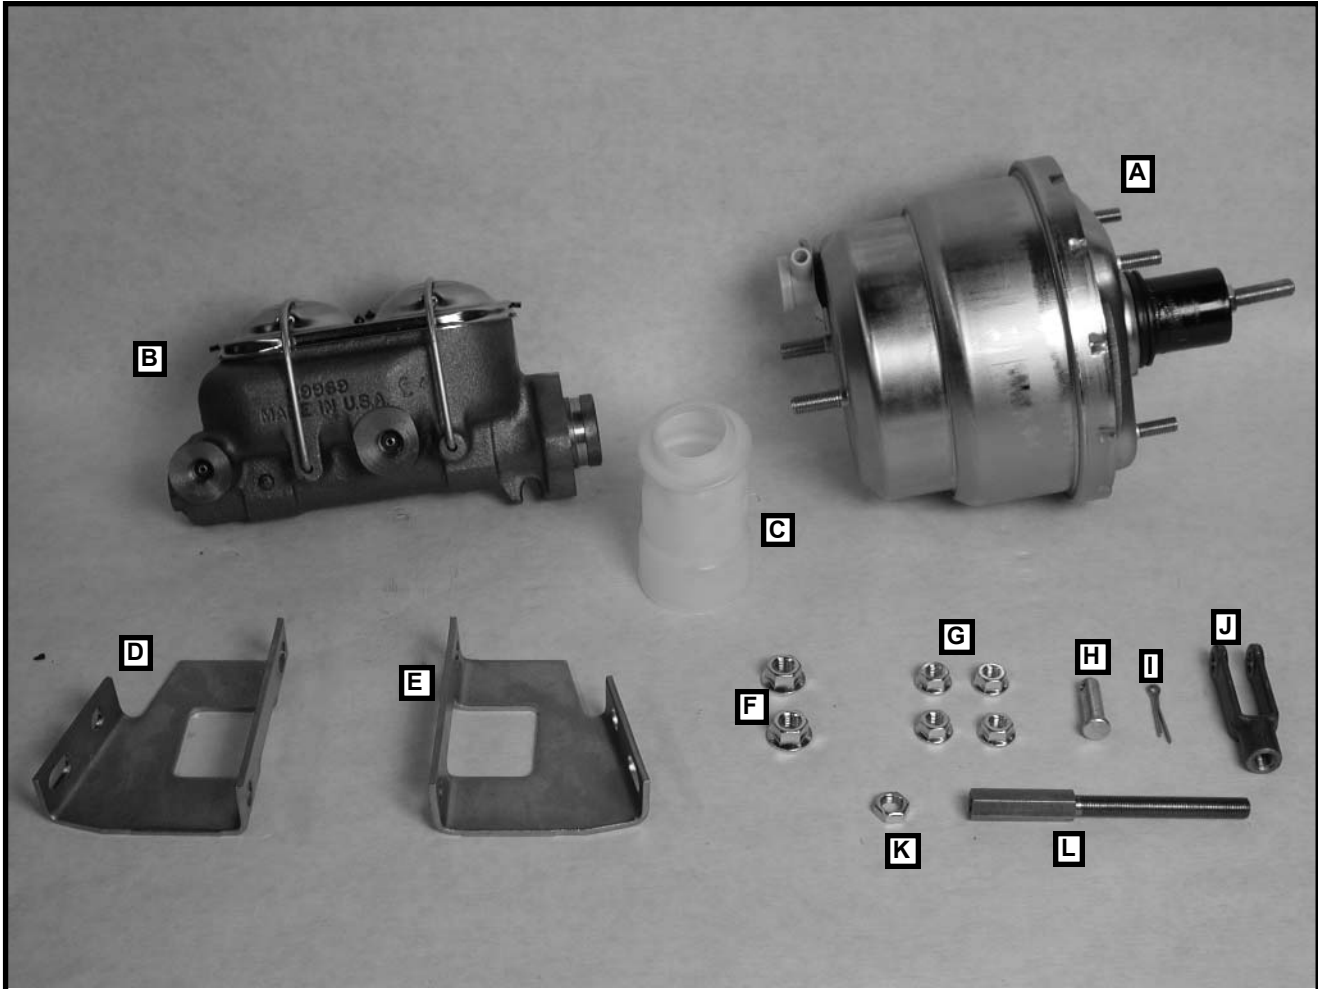

15. After attaching the hard lines bleed the system and test for pedal firmness. Test the brakes before driving.

FOR 1970 & UP GM A, B, F, X BODY

1. Remove the brake pedal from the vehicle.
2. Cut off the existing pin on the pedal where the push rod had attached.
3. Drill a 3/8" hole through the pedal in the same location as the pin.
4. Re install pedal.
5. Install booster as above.
