Combination Valve Tool

Use Before Bleeding.....

For brake systems utilizing our combination valve, use this tool when bleeding your brakes to lock the valve in place and keep the valve from tripping. Simply remove the warning light switch (white plug) on the valve, then screw in this tool while bleeding your brakes. After the bleeding process is finished replace the warning light switch. Save yourself the headache of having to reset the valve.

HW3350 Instructions

Our HW3350 valve tool allows you to bleed your brake system without tripping the combination valve.

1. When you are ready to bleed your brakes, remove the warning light switch (white plug with single connector pin) from the combination valve.

2. Screw the HW3350 valve tool into the warning light switch hole on the combination valve.

3. Bleed the brakes.

4. After the brake system has been completely bled, remove the HW3350 valve tool from the combination valve.

5. Reinstall the warning light switch.
